1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 26 January 2004 has been entered.
2. The following is an examiner's statement of reasons for allowance: The prior art of record does not teach or fairly suggest a surface-pressure generating device including first and second movable plates each having guide openings for receiving guiding tie bars such that the first and second movable plates are movable along the guiding tie bars, a linear motor attached to the second movable plate for moving the second movable plate from and to the stationary plate, and a piezoelectric actuator arranged and fixed between the first and second movable plates for moving the first movable plate in relation to the second movable plate towards the stationary plate, as claimed in claim 4.

The closest prior art of record is considered to be Japan 5-293861 (Figures 1-6), disclosing a surface-pressure generating device including guiding tie bars 15 fixed to a stationary plate 10, a first movable plate 12 and a second movable plate 14, the second movable plate having guide openings for receiving the guiding tie bars such that the second movable plate is movable along the guiding tie bars, a linear motor 17 attached (via toggle mechanism) to the second movable plate 14 for moving the second movable plate from and to the stationary plate, and a piezoelectric actuator 13 arranged and fixed between the first and second movable plates for moving the first movable plate in relation to the second movable plate towards the stationary plate; however, Japan 5-293861 does not teach or fairly suggest providing guide openings in the

first movable plate 12 for receiving the guiding tie bars such that the first movable plate is movable along the guiding tie bars. As argued by Applicant in the remarks filed on 26 January 2004, such an arrangement allows for precise movement of the first movable plate in relation to the second movable plate because the movement of the first movable plate as well as the second movable plate are guided through the guiding tie bars.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
